When Agents Work Together

Human in, agent to agent, human approves

HUMAN IN
You choose the input

→

AGENT TO AGENT
Each with one clear job

→

HUMAN OUT
You approve the result

WEEK 4 LEVEL 1 WORKSHOP

Wednesday, November 11, 2026

Human in, human out

HUMAN IN
You choose the input

→

ONE AGENT
Does the task in the middle

→

HUMAN OUT
You decide what happens next

WHAT YOU PUT IN

- An email
- A spreadsheet
- A document
- A list

The agent only works on what you give it, and you decide what to do with the result.

Human in and human out is the safest way to control the actions.

Graduating to agent to agent

More agents in the middle.
The same person at both ends.

Several agents give you more control over a more complex workflow.

In today’s builds, every agent is Claude. Each one gets a different job.

What more agents give you

One clear job each

Each agent gets a short set of rules.
Short rules are easier to follow and to fix.

A second look

One agent does the work.
Another checks it against what you provided.

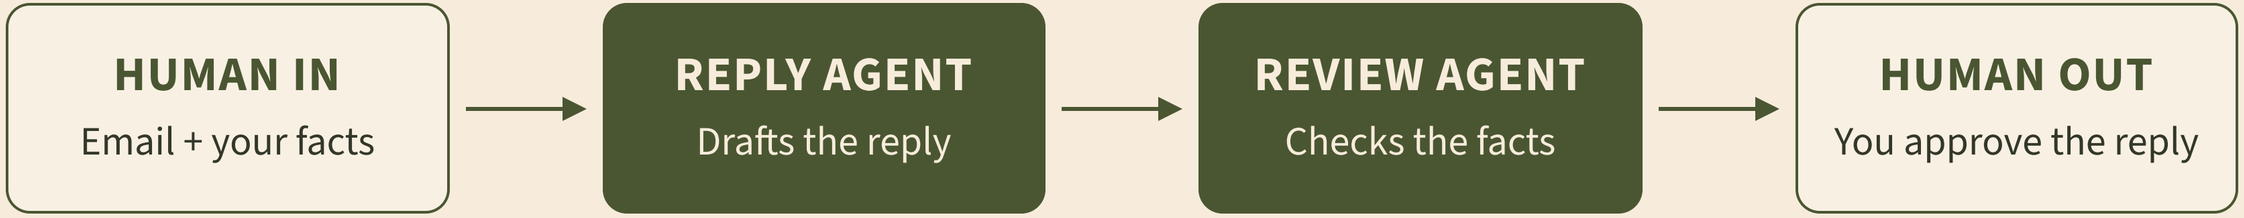

A handoff you can read

You see the work in the middle,
not only at the end.

You control the input. You approve the output.

DEMO 1 AN EMAIL GOES IN

Reply and Review Desk

THE CUSTOMER'S EMAIL

"Can you start next month? Can we get the 15% discount?"

ILLUSTRATIVE REVIEW

No discount is approved in your facts.
Starts are 6 to 8 weeks out.
Check the draft before you approve.

One agent drafts. One agent checks. Nothing is copied until you approve.

PASTE INTO CLAUDE THEN TRY THE RESULT

Build the reply and review artifact

Build an AI-powered custom artifact for customer replies.
Fields I paste into: customer email, approved facts and voice.
On “Draft and review,” use Claude inside the artifact twice.
Agent 1, the Reply Agent, drafts a reply from my facts.
Agent 2, the Review Agent, gets the draft and the same facts.
It lists any price, date or promise my facts do not support.
Show both results in labelled boxes.
Let me edit the draft and run the review again.
Keep Copy locked until I click “I approve this reply.”
Give each agent its own instructions on every run.
Do not send messages, connect apps or save entries.

YOUR TURN

7 minutes

Paste a customer email.
Paste your facts.
Click Draft and review.

STRETCH TEST

Add “20% off” to the draft.
Review again. Does it flag it?

DEMO 2 A SPREADSHEET GOES IN

Jobs List to Customer Updates

HUMAN IN
Your jobs spreadsheet

→

PLAN AGENT
Flags what needs you

→

UPDATE AGENT
Drafts the updates

→

HUMAN OUT
You approve each one

ILLUSTRATIVE HANDOFF NOTE

J-102: quote date is “Friday maybe”
J-103: past its date, customer called twice
J-104: no owner assigned

ILLUSTRATIVE UPDATE DRAFT

“We are finishing your quote and will confirm the date soon.”

“Maybe” stays “maybe” at every step. You choose what goes out.

PASTE INTO CLAUDE THEN TRY THE RESULT

Build the jobs list artifact

Build an AI-powered custom artifact for my open jobs list.
Fields: my business, today’s date and pasted spreadsheet rows.
On “Plan and update,” use Claude inside the artifact twice.
Agent 1, the Plan Agent, lists jobs that are late, at risk
or missing an owner. Show this as the handoff note.
Agent 2, the Update Agent, gets only the handoff note.
It drafts a short customer update for each flagged job.
Keep “maybe” dates tentative. Never invent dates or reasons.
Put an Approve box on each update. Copy only approved ones.
Give each agent its own instructions on every run.
Do not send messages, connect apps or save entries.

YOUR TURN

7 minutes

Paste rows from a list.
Run the artifact.
Read the handoff note.

STRETCH TEST

Include “Friday maybe.”
Does the update promise
Friday?

DEMO 3 A DOCUMENT GOES IN

Marketing Content Team

FROM YOUR DOCUMENT

"We send a written quote within five business days."

ILLUSTRATIVE EDITOR NOTE

The email draft says quotes are free.
Your document does not say that.
Confirm or remove it.

Your document is the source. The editor checks every draft against it.

PASTE INTO CLAUDE THEN TRY THE RESULT

Build the content team artifact

Build an AI-powered custom artifact for business content.
Fields: business, audience, voice and my pasted document.
On “Create drafts,” use Claude inside the artifact in steps.
The Manager Agent writes a short brief from my document.
The Social Agent and the Email Agent each get the brief and write one draft.
The Editor Agent checks both drafts against my document and lists anything it does not say.
Show every step in a labelled box.
Keep Copy locked on each draft until I click Approve.
Never invent testimonials, results, prices or offers.
Do not publish, connect apps or save entries.

YOUR TURN

7 minutes

Paste a document you wrote.
Create the drafts.

STRETCH TEST

Ask for a testimonial. Does the Editor flag it?

Three tests for a team of agents

Test	Try this	Look for
Clean handoff	A task you handle often	The second agent uses the first agent’s work
Passed-on mistake	Put an unapproved promise in the first result	The checking agent catches it
Human approval	Try to copy a result before you approve it	Nothing goes out until you say so

Fix one weak instruction. Repeat the same test.

Your next handoff

“I will put in _____.
I will approve _____.”

Record what the second agent changed or flagged.
Bring one handoff that worked and one that did not.

Use fictional or anonymized details unless your business policies and the tool’s settings permit more.

Thank you

Thanks for going down the rabbit hole with us.
